

Create the application

What you will create

You will create **Flappy Kiro**, an arcade-style endless-runner game where players control Ghosty, a friendly ghost character, through challenging wall obstacles.

Vibe vs Spec sessions

When interacting with Kiro in the chat window, Kiro will work in either a **Vibe** or **Spec** session.

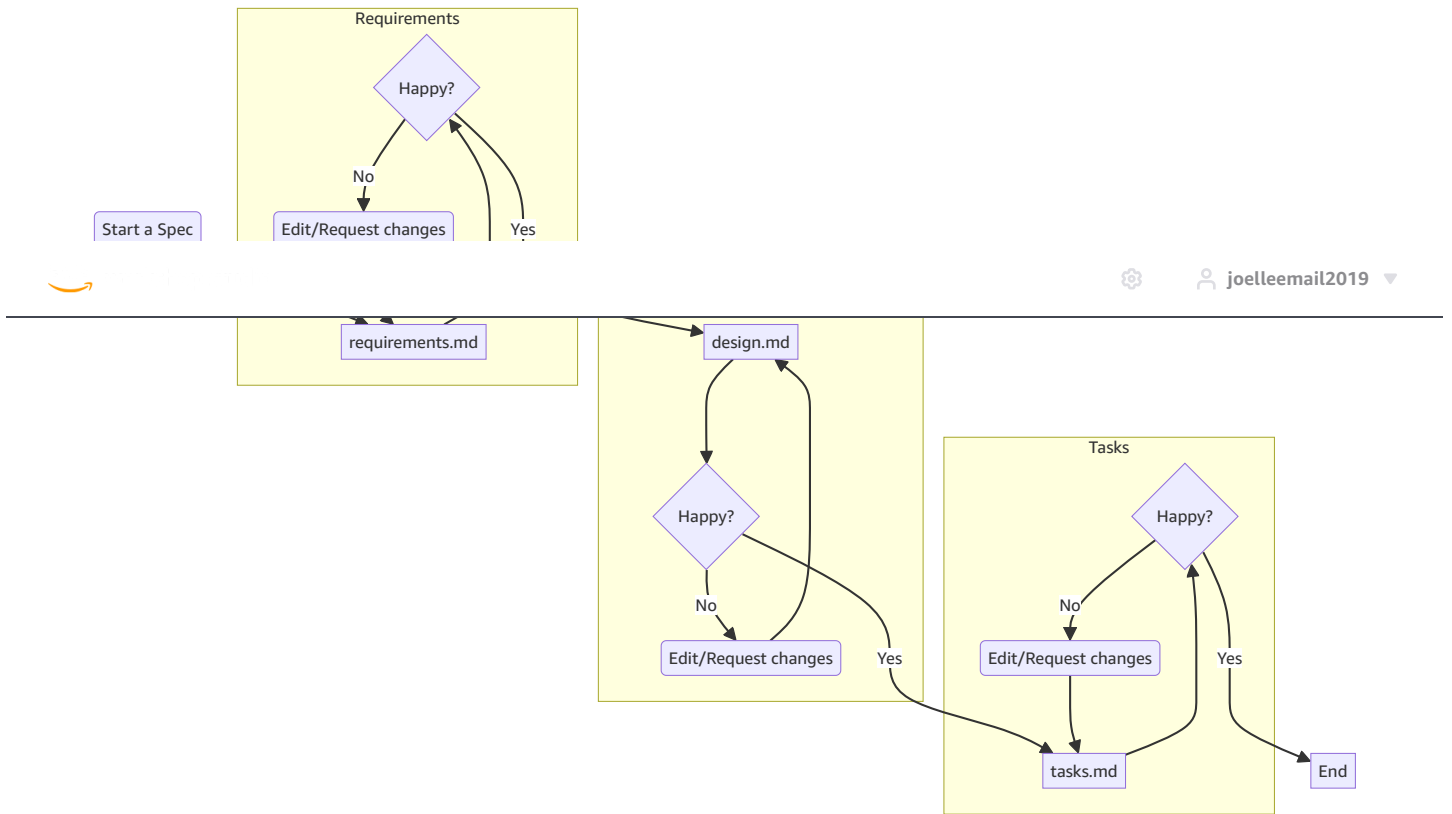

- *Vibe sessions* are interactive question-and-answer (Q&A) focused sessions, and are designed for quick questions, explanations, and building projects through a more conversational approach.
- *Spec sessions* guide you through a structured approach to complex development tasks in Kiro that formalizes the software development process. It transforms high-level ideas into detailed implementation plans with systematic execution and clear tracking.

You can switch between Vibe sessions and Spec sessions using the session picker when you launch a new session. This allows you to choose the interaction style that best suits your current task. For more details, see the [Vibe vs. Spec sessions](#) [🔗](#) documentation.

Spec driven development with Kiro

Kiro uses three key specification files to structure development:

- **Requirements** - Defines what needs to be built with user stories and acceptance criteria.
- **Design** - Outlines the technical approach and implementation details.
- **Tasks** - Breaks down the work into discrete, executable steps.

Tip

When you already know the scope, you can choose the [Quick Plan](#) workflow. Kiro asks any clarifying questions up front, then generates requirements, design, and tasks in one pass - skipping the approval gates between phases.

Resuming a Kiro session

One of the key benefits of creating, updating and referring to markdown files is that you can easily stop and restart Kiro, and you will jump to where you are in the software design process.

Note

If you have any issues with Kiro, stop and restart the application to resume your workshop.

Objective

In this section, you will create and refine the game's specification files.

Estimated run time

25 minutes.
