Summary

Conclusion

Congratulations 🎉 - you've completed the **Kiro Express** workshop.

In this workshop, you built a complete Flappy Kiro arcade game using Kiro's spec-driven development approach.

Depending on your implementation, your game included:

- **Game mechanics:** Physics-based Ghosty movement with collision detection.
- **Visual systems:** Canvas rendering with animations and particle effects.
- **Audio integration:** Sound effects for gameplay feedback and background music.

- **Performance optimization:** 60 FPS gameplay with efficient rendering.
- **Production deployment:** Optimized hosting with analytics and monitoring.

You have learned how to use Kiro:

- **Specifications** guide better AI game development outcomes.
- **Steering files** ensure consistent game architecture and performance.
- **Performance hooks:** Implement automated performance monitoring and quality checks.
- **MCP integration:** Connect external services for sprites, audio, and analytics.

You have looked at some best practices using agentic AI in the software development life-cycle:

- **Game specifications:** Write clear requirements that guide AI game development.
- **Steering files:** Create consistent game code patterns and architecture standards.
- **Agentic development:** Build games with AI assistance and automation.

Happy building 🛠️!
