

Kiro powers

Overview

In this section you will use Kiro powers to deploy your Flappy Kiro game to AWS using CDK and CloudFormation.

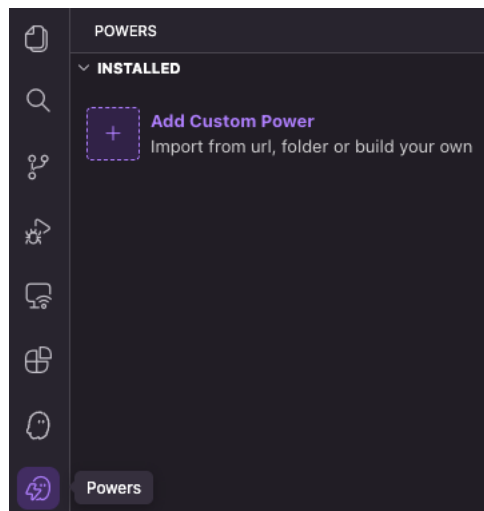

Kiro powers

[Kiro powers](#) are specialized packages that give AI agents instant access to expert knowledge for specific technologies. Powers bundle MCP tools, steering files, and hooks into a single installation that activates on-demand based on your conversation context.

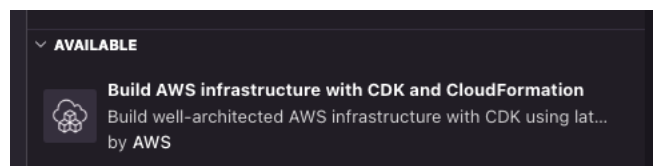

Install AWS infrastructure power

You will install the [Build AWS infrastructure with CDK and CloudFormation](#) Kiro power.

1. In the Kiro navigation bar, select the **Power** icon.

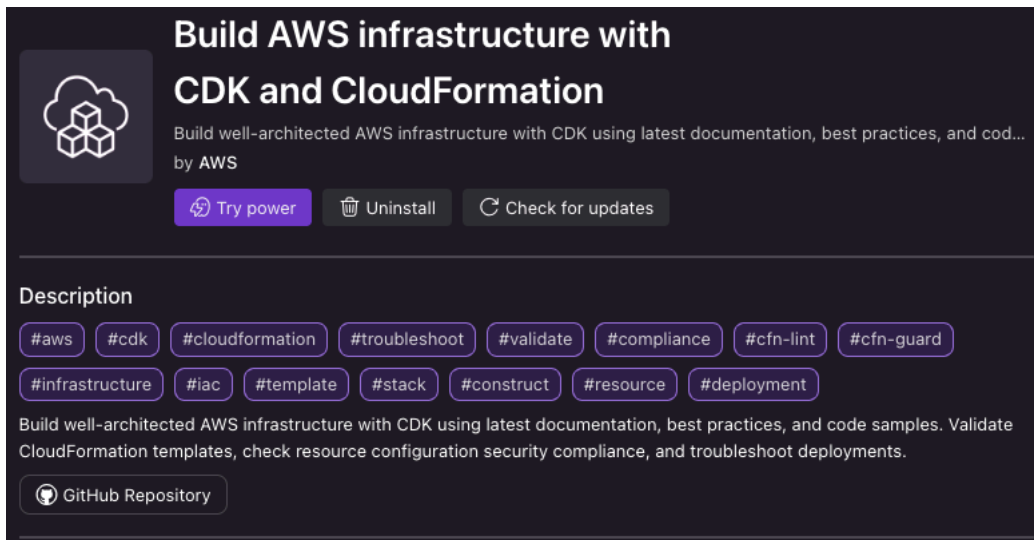

2. In the **AVAILABLE** section, select **Build AWS infrastructure with CDK and CloudFormation**.

3. Choose **+ Install**.

Ask about deployment options

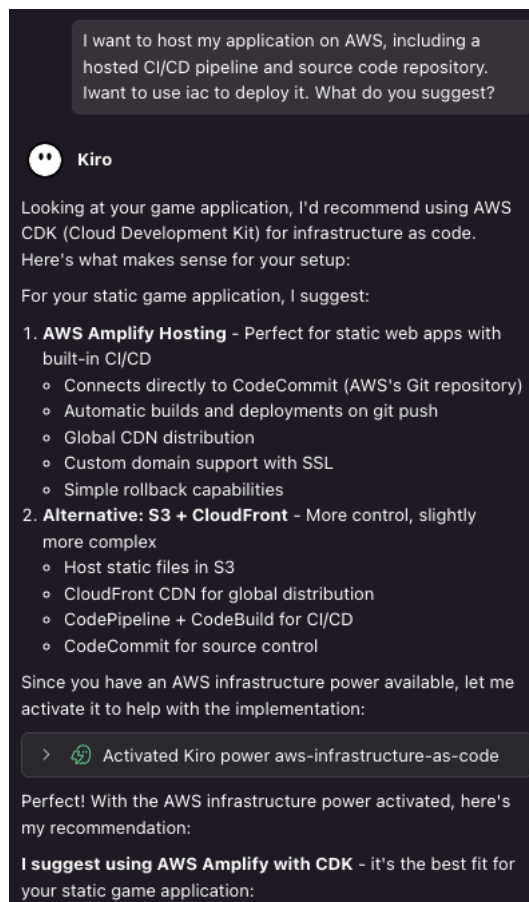

The power is now installed. You can invoke the power by asking Kiro to use the power. The power will activate if you use any of the key words highlighted in the power's **Description** section.

Ask Kiro how to deploy your game.

► Example prompts

The Kiro power activates and searches AWS documentation to provide guidance on deployment patterns.

Deploy to AWS with Amplify

Ask Kiro to create a CDK stack that deploys your game and hosts it on Amplify.

► Example prompt

After running `cdk deploy` , you'll receive an Amplify URL:

Outputs:

```
AmplifyWebAppStack.AmplifyAppUrl = https://main.d1234567890abc.amplifyapp.com
```

(Optional) Troubleshoot deployments

Ask the power to analyze failed stack deployments.

► **Example prompts**

Summary

You installed the AWS infrastructure power and deployed your Flappy Kiro game to AWS using CDK and Amplify hosting.
