

[Event dashboard](#) > [Create the application](#) > Produce implementation tasks

Produce implementation tasks

Overview

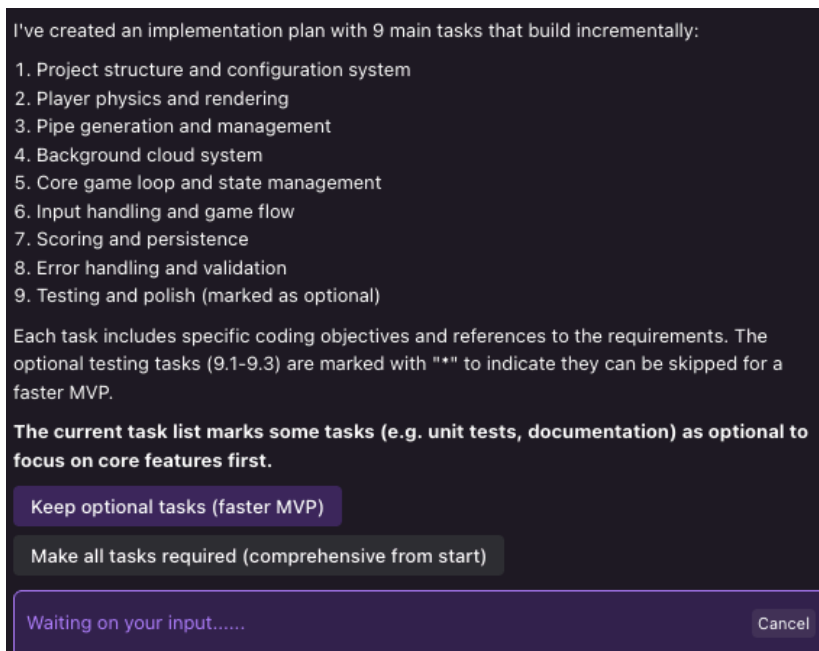

In this section you will produce an [implementation plan](#) in a `tasks.md` file.

The `tasks.md` file is where you break down the implementation into discrete, executable steps with clear dependencies and acceptance criteria. This file provides a detailed implementation plan with trackable tasks that can be executed individually or all at once.

Resolving any questions

As part of the generation of the `tasks.md`, Kiro may need help on resolving any questions.

In the Kiro panel, review and select the appropriate answer to any questions.

Refine the implementation tasks

You know what to do!

► **Example prompts**

Complete the tasks

Finalize the implementation plan. Don't forget to commit your changes!

 Tip

Try asking Kiro to commit the changes!

► **Example prompts**

Wrap up

You have completed the implementation tasks.

Next you will build the application using Kiro!
