

Run Flappy Kiro!

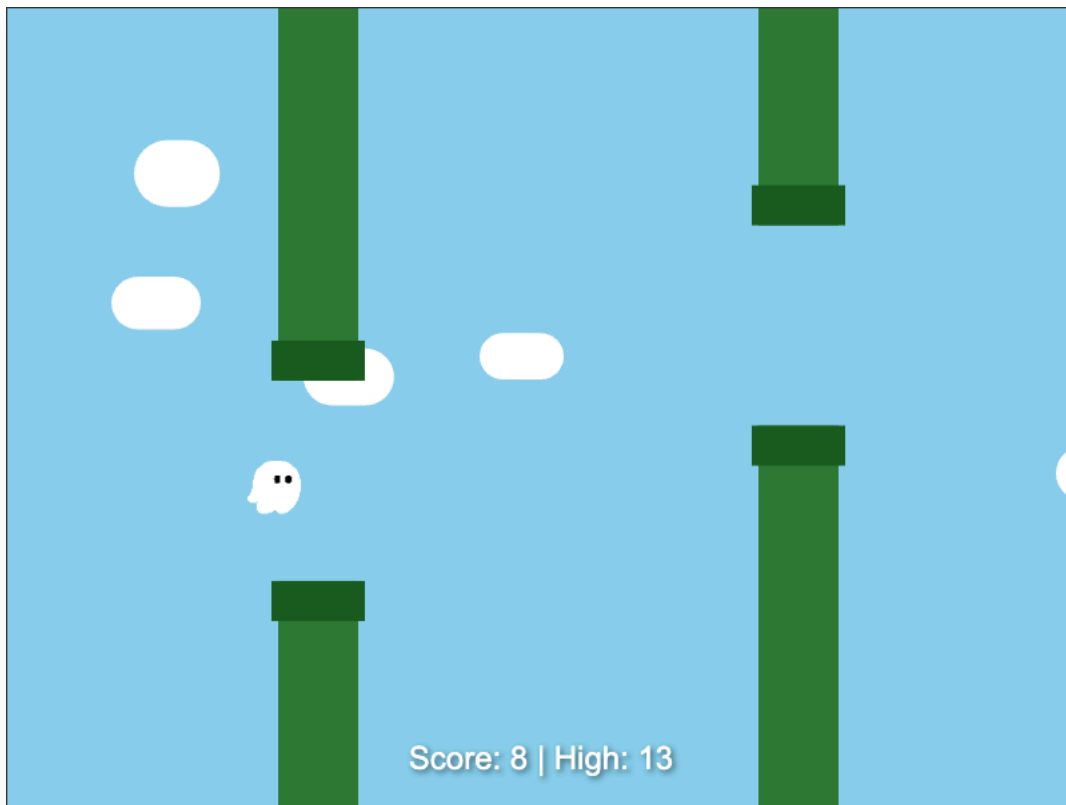

Overview

In this section, you will run your Flappy Kiro game, and get Kiro to fix any issues and implement any enhancements.

Run the game

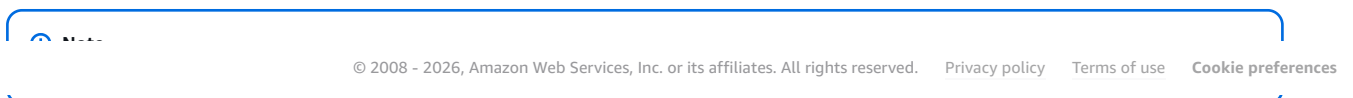

In the Kiro chat panel, instruct Kiro to start the application and check that it is running.

► Example prompt

Fix any issues and retry

If Flappy Kiro is not running, instruct Kiro to investigate and resolve any issues.

(Optional) Fix a bug with a Bugfix spec

For a stubborn bug, start a [BugFix Spec](#) instead of a plain chat request. Kiro walks you through root cause analysis, a focused fix, and steps to prevent the bug returning - keeping the change surgical so working parts of the game stay untouched.

► Example prompt

(Optional) Extend the game

Something you don't like? Ask Kiro to extend!

► Example prompts

Finalize your game

Commit your application to the local git repository.

Summary

You have just created the next on in **Flappy Bird** game! Watch as **Charlie** goes through the pipeline, it does a test on the code and it is successful!
